Professional Summary

Senior Software Engineer and Technical Lead with **10+ years** of experience building distributed financial systems and cloud-native architectures. Spent five years as part of the Core team at Jimmy Technologies (HomeCredit), delivering mobile banking products across four SEA markets to millions of users. Combine deep backend expertise in .NET and Azure with hands-on DevOps practice — from Kubernetes cluster setup to CI/CD pipeline automation. Thrive in environments where engineering culture is strong and the work has real complexity. **Microsoft Certified Solutions Developer (MCSD).** Fluent in English, experienced working in fully international teams.

Experience

- **Svetoch (Paper Manufacturing)** — Russia (On-site)
  Lead Software Engineer — *Jun 2025 – Present*
  - Inherited a monolithic Windows desktop application with no version control, no CI/CD, and manual builds taking 1–2 hours. Introduced a structured engineering process from scratch under significant organizational resistance.
  - Deployed a single-node Kubernetes cluster on a corporate server; established GitOps practices with Ansible and YAML-based configuration management, eliminating reliance on tribal knowledge.
  - Set up a self-hosted Gitea instance for internal source control with webhook-based automation; decomposed the monolith into separate backend and frontend services.
  - Automated builds with Tekton Pipelines and introduced semantic versioning with artifact archiving. Reduced build time from 1–2 hours to **7–10 minutes**; increased release cadence from once a month to **4–6 releases per day** — each developer can now trigger a build independently.
  - Conducted two full product research cycles for import substitution; neither was adopted, but both were completed independently end-to-end.
- **Jimmy Technologies** — Prague, Czech Republic (Remote)
  Senior Backend Developer — HomeCredit SEA Expansion — *Apr 2021 – Present*
  - Member of the RETENTION_A squad (10 engineers) within the broader HomeCredit mobile banking platform — a multi-squad programme spanning ACQUISITION, RETENTION, CONTENT and CORE teams across Vietnam, Philippines, Indonesia, and India.
  - Owned full delivery of **5 production microservices** on .NET Core 8 in Azure: account management, financial data (transactions, BNPL, credit/debit cards, tariff selection), documents, statements, and a frontend BFF aggregator. Also delivered **4 country-specific e-sign/KYC services**, each integrated with a different local digital signature provider.
  - Designed and maintained OpenAPI and AsyncAPI contracts; wrote unit and service-level tests; handled Azure deployments across all four markets.
  - Researched and internally championed Tracetest as a replacement for the RestTest Framework — conducted the evaluation, built the case, and presented it to the team.
  - Travelled on-site to Vietnam to onboard local engineering teams on digital signature integration and regional support workflows.
  - The platform reached **Top 10 in the Finance category** on Google Play across target markets.
- **Meta IT GmbH** — Berlin, Germany (Remote)
  Fullstack Developer — *Jul 2020 – Jan 2021*
  - Built a Workflow Editor in Angular for a MedTech platform — a custom real-time UML diagram engine for managing patient treatment pathways. Implemented data validation and persistence layers for critical medical records.
- **GMCS (Microsoft Consulting Partner)** — Moscow, Russia
  Lead Developer / Technical Evangelist — *Sep 2016 – Jul 2020*
  - Designed and delivered Order Tracking System for Leroy Merlin — a distributed data aggregator ingesting streams from JMS, ESB, SMTP, and multiple databases. Built the full backend in .NET Core Web API, supervised Angular frontend development, and architected the entire infrastructure from scratch.
  - Set up a production-grade **baremetal Kubernetes cluster** (2016–2017, when K8s was still early) with Redis cluster, PostgreSQL with streaming replication and pgpool2, RabbitMQ, ElasticSearch, distributed WebSocket backend/frontend, and NFS. Configured Grafana, Prometheus, and Kibana dashboards for full cluster observability.

- Configured prod replication across two datacentres (Russia and France) with a full DRP solution using ipvsadm and keepalived. Set up separate staging and test environments.
- Reduced environment provisioning time by **95%** (from 24 hours to 1 hour) by driving Docker and Kubernetes adoption across staging and production workloads at client sites.
- Led solutions architecture in three high-value pre-sales engagements; evangelized microservices and DevOps practices across 5+ internal teams.

Technical Skills

- **Backend**: .NET Core 8, C#, ASP.NET Core, Entity Framework, LINQ, gRPC, REST, Python (Django)
- **Databases**: PostgreSQL, MS SQL Server, MongoDB, Redis, CosmosDB, ElasticSearch
- **Cloud & DevOps**: Microsoft Azure (App Services, CosmosDB), Kubernetes (baremetal & managed), Docker, Helm, Terraform, Tekton, Ansible, CI/CD, Linux (RHEL, CentOS)
- **Distributed Systems**: Apache Kafka, RabbitMQ, Debezium, Event-Driven Architecture, CQRS, WebSocket
- **Observability**: Grafana, Prometheus, Kibana, ElasticSearch, Tracetest
- **API & Contracts**: OpenAPI, AsyncAPI, gRPC, REST, BFF pattern
- **Frontend & Desktop**: Angular, TypeScript, HTML5/JS, React (in progress), AvaloniaUI
- **Other**: Gitea, GitOps, semantic versioning, DRP (ipvsadm, keepalived), NFS, pgpool2

Certifications

- **Microsoft Certified Solutions Developer (MCSD)**: App Builder, Expert Level — 2019
- **Microsoft Certified Solutions Associate (MCSA)**: Web Applications — 2018
- **Udacity Nanodegree**: Intel Edge AI for IoT Developers — 2020
- **Udacity Nanodegree**: Android Developer — 2018

Education

- **Tula State University** Tula, Russia
  Specialist in Information Systems *2010 – 2016*
